About Me

I'm passionate about solving technical challenges. I'm communicative and open-minded, eager to learn new things that are practical, and able to quickly adapt to new tools, development environments, and changing technological requirements. I don't approach problems as one-off tasks, I always strive to create reusable solutions that can provide value in the future. As part of my work and interests, I focus on object oriented programming and design. Because of that, I would like to apply my skills in the IT sector and related fields.

WORK EXPERIENCE

- Centrum kultury a vzdělávání Moravská Ostrava, příspěvková organizace
 - Actor in educational plays | 2023 - present
 - Help with organisation of events held by Moravská Ostrava a Přívoz city district

- Software: Visual Studio Code, Godot, Git, GitHub, SketchUp, Blender, MS Office
- 3D Printing (Prusa)
- Languages: Czech – native, English – B1
- Driving license B

INTERESTS

I've always enjoyed creative work with a practical outcome. I have been interested in programming, IT, and technology for many years, both academically and as a hobby. This naturally led to my interest in video game development. I am interested in all aspects of the field, including game design, user interface, user experience, graphics, and AI, but what I enjoy most is procedural environment generation. I am also no stranger to hands-on work, I enjoy repairing various things, especially electronics. In addition, I am involved in amateur theatre, where I focus not only on acting but also on the technical side of things. It is precisely in theatre where you can learn that teamwork and a healthy dose of humor are the best tools to have when things don't go according to the script.
